bitstream at a first code transfer rate to a second moving-picture bitstream at a second code transfer rate, the incoming first moving-picture bitstream having been obtained by coding first pictures set at a predetermined interval and used as reference pictures for

inter-picture prediction of a moving picture to be coded and coding second pictures

different from the first pictures, the apparatus comprising: (See figure 1)

a motion amount detector to obtain motion activity on the incoming first moving-picture bitstream; (See figure 1 item 106.)
